

Put the number in brackets when we substitute it in.

Substituting Numbers (A)

If $c = 11$, find $9c - 5$.

$$\begin{aligned} 9(11) - 5 &= 99 - 5 \\ &= 94 \end{aligned}$$

If $b = 6$, $c = 0$, find $5b - c + 7$.

$$\begin{aligned} 5(6) - (0) + 7 &= 30 - 0 + 7 \\ &= 37 \end{aligned}$$

If $x = 5$, $y = -3$, find $2x^2 - 3y + 4$.

$$\begin{aligned} 2(5)^2 - 3(-3) + 4 &= 2(25) - (-9) + 4 \\ &= 50 + 9 + 4 \\ &= 63 \end{aligned}$$
