

## Probability (A)

A bag has 3 red balls and 14 blue balls. What is the probability of picking a red ball?

A bag has 15 red balls and 4 blue balls. What is the probability of picking a red ball?

A bag has 5 red balls and 4 blue balls. What is the probability of picking a red ball?

A bag has 6 red balls and 4 blue balls. What is the probability of picking a red ball?

A bag has 1 red balls and 9 blue balls. What is the probability of picking a red ball?

A bag has 1 red balls and 11 blue balls. What is the probability of picking a red ball?

## Probability (B)

A bag has 5 red balls and 2 blue balls. What is the probability of picking a red ball?

A bag has 4 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 1 red balls and 13 blue balls. What is the probability of picking a red ball?

A bag has 14 red balls and 3 blue balls. What is the probability of picking a red ball?

A bag has 11 red balls and 9 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 8 blue balls. What is the probability of picking a red ball?

## Probability (C)

A bag has 1 red balls and 4 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 8 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 15 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 1 red balls and 18 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 7 blue balls. What is the probability of picking a red ball?

## Probability (D)

A bag has 2 red balls and 10 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 7 blue balls. What is the probability of picking a red ball?

A bag has 8 red balls and 5 blue balls. What is the probability of picking a red ball?

A bag has 7 red balls and 1 blue balls. What is the probability of picking a red ball?

A bag has 14 red balls and 3 blue balls. What is the probability of picking a red ball?

## Probability (E)

A bag has 1 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 15 red balls and 2 blue balls. What is the probability of picking a red ball?

A bag has 10 red balls and 1 blue balls. What is the probability of picking a red ball?

A bag has 9 red balls and 9 blue balls. What is the probability of picking a red ball?

A bag has 14 red balls and 5 blue balls. What is the probability of picking a red ball?

A bag has 13 red balls and 1 blue balls. What is the probability of picking a red ball?

## Probability (F)

A bag has 3 red balls and 7 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 9 blue balls. What is the probability of picking a red ball?

A bag has 9 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 10 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 9 blue balls. What is the probability of picking a red ball?

A bag has 4 red balls and 1 blue balls. What is the probability of picking a red ball?

## Probability (G)

A bag has 8 red balls and 11 blue balls. What is the probability of picking a red ball?

A bag has 7 red balls and 4 blue balls. What is the probability of picking a red ball?

A bag has 18 red balls and 1 blue balls. What is the probability of picking a red ball?

A bag has 13 red balls and 5 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 15 blue balls. What is the probability of picking a red ball?

A bag has 8 red balls and 2 blue balls. What is the probability of picking a red ball?

## Probability (H)

A bag has 10 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 5 red balls and 2 blue balls. What is the probability of picking a red ball?

A bag has 16 red balls and 1 blue balls. What is the probability of picking a red ball?

A bag has 4 red balls and 2 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 14 blue balls. What is the probability of picking a red ball?

A bag has 13 red balls and 1 blue balls. What is the probability of picking a red ball?

## Probability (I)

A bag has 12 red balls and 5 blue balls. What is the probability of picking a red ball?

A bag has 1 red balls and 4 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 5 blue balls. What is the probability of picking a red ball?

A bag has 5 red balls and 6 blue balls. What is the probability of picking a red ball?

A bag has 3 red balls and 14 blue balls. What is the probability of picking a red ball?

A bag has 9 red balls and 4 blue balls. What is the probability of picking a red ball?

## Probability (J)

A bag has 11 red balls and 9 blue balls. What is the probability of picking a red ball?

A bag has 4 red balls and 16 blue balls. What is the probability of picking a red ball?

A bag has 15 red balls and 3 blue balls. What is the probability of picking a red ball?

A bag has 1 red balls and 8 blue balls. What is the probability of picking a red ball?

A bag has 6 red balls and 1 blue balls. What is the probability of picking a red ball?

A bag has 2 red balls and 8 blue balls. What is the probability of picking a red ball?
